

Spears

EATON OIL TOOLS, INC. maintains a complete line of abandonment equipment, including casing cutters, casing spears, stabilizers, marine swivels, and other miscellaneous tools used for the abandonment of wells from platform removals with crane setups, to both floating and stationary drilling rigs.

Spears

EATON utilizes both a straight pull ITCO type spear and an universal type spear depending on the job specifications. The ITCO type spear is used to pull casing strings that have been severed and are to be laid down. It is available in a variety of O. D. sizes that when incorporated with the correct grapple can catch from 5 1/2" to 30" casing ranges. The Universal type spear assembly can also be used to pull severed casing as well. In addition, this type of spear is used to engage and back-out casings from Mud line hanger systems during a temporary plug and abandonment. This spear and grapple assembly is available to catch a range of casing sizes from 5 1/2" through 30".
